Adding V-NET sensor modules requires:

V-Net Tee Interface cable. P/N: 280-CA-DM-T009

V-Net Termination cap P/N: 280-CA-VM-TCAPF

The above items are required in order to install Racepak V-Net module/sensor kits on the Haltech IQ3 Dash. These items are not included with the Haltech IQ3 dash and must be purchased separately from Racepak or your Haltech dealer.

To add a V-Net module/sensor, plug the straight red end of the cable in to the V-Net port on the back of the IQ3. On the tee side of the connector, plug the Haltech interface cable in to the red side and plug the V-Net module in to the blue side. Install the V-Net termination cap on the open end of the V-Net module.
